DETAILED ACTION

Information Disclosure Statement

1. The examiner has considered the information disclosure statement (IDS) submitted on 5 December 2005.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-46, 57, and 58, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Waldvogel in the VarsaKey Framework.

With regard to claim 1, Waldvogel discloses an information recorder (computer) including a cryptography means (new TEK) having a node key (old TEK) included in a tree structure (page 1619) in which different recorders are included as leaves (computers of group members) each having a unique leaf key (KEK, page 1619), the means generating a key based on data (the old TEK, which is hashed, 1619) which is renewed by the node key (1619). The encryption key is a first key when playback of multimedia (page 1614 paragraph beginning "with") is restricted, and a second when it is not restricted (page 1619).

With regard to claim 2, Waldvogel discloses each computer has the TEK and function (1619).

Application/Control Number: 09/980,272

Art Unit: 2134

With regard to claim 3, Waldvogel discloses the KEK (unique key) is also renewed using the function (1619).

With regard to claim 4, Waldvogel discloses when the key is renewed; the one-way function is transmitted (KRB) so each lower member can renew their own TEK and KEK (1618-1619).

With regard to claim 5, Waldvogel discloses the one-way is encrypted with the TEK (1619) it is inherently at least temporarily stored.

With regard to claim 6, data is inherently stored at an address, which is a correlated number.

With regard to claim 7, Waldvogel discloses that only group members receive the updated key, and thus a player (computer) has a restriction by what group he is a member of, and will use a first key if he is member of a first group, and a second key if member of a second group. (1616-1619).

With regard to claim 8, The KEK is a title unique key generated from a master key (one-way function).

With regard to claim 9, Waldvogel discloses including a token with the TEK and KEK to time stamp the keys (1625).

With regard to claims 11 and 12, the encryption used is copy control that only allows computers with the proper key to copy the data to be decrypted.

With regard to claims 13-21, 23, and 24, since Waldvogel discloses a synchronous encryption system, the decryption key is the encryption key, thus for the reasons above Waldvogel discloses each limitation of these claims.

Application/Control Number: 09/980,272

Art Unit: 2134

With regard to claims 25-32, 34-43, 45, and 46, these describe the method outlined above as being performed by the information recorder.

With regard to claims 57 and 58, these describe the program medium of the recorder as outlined above.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 10, 22, 33, and 44, as best understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Waldvogel.

With regard to claims 10, 22, 33, and 44, Waldvogel discloses claim 1, as outlined above, but does not mention the DES encryption algorithm. The examiner takes official notice that DES is well known in the art as a secure algorithm. It would have been obvious to one of ordinary skill in the art to use DES in the system of Waldvogel to add the additional security that DES offers.

Response to Arguments

6. Applicant's arguments filed 15 May 2006 have been fully considered but they are not persuasive.

With regard to applicant's argument that the key data is not built within the recorder, the examiner points out that this is being understood as being stored within the recorder. The claim does not state when it is built in the recorder, i.e. at time of

Art Unit: 2134

manufacture. This point is emphasized by the fact that the key data is renewable, and a renewed key data being built in is understood as being stored locally.

With regard to applicant's argument that, "Waldvogel is not concerned with playback of the recorded medium", the examiner points to page 1614 where Waldvogel states, "Today, the most important class of applications taking advantage of multicast transport services are collaborative multimedia applications and conferencing services"

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacob Lipman whose telephone number is 571-272-3837. The examiner can normally be reached on M-Th 7 AM-3 PM.

Art Unit: 2134

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jacques Louis-Jacques can be reached on 571-272-6962. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
